Yukon Energy is committed to providing our customers with exceptional value in rates, service, reliability and public safety. This annual report is a tribute to all our customers and our highly professional and dedicated staff.

MESSAGE FROM THE PRESIDENT

2005 was a time of putting our house in order and planning for our future. For much of the year, Yukon Energy was involved in a Yukon Utilities Board hearing that allowed for a general review of our revenue requirements. A week of public hearings took place in April and the Board rendered its decision in October. We did not seek an increase in our firm rates nor were we directed to raise our rates for firm customers. Key elements of the decision are outlined further on in this report.

A great deal of our time was spent in 2005 preparing a 20-year resource initiative that will guide us in making sound strategic and long-term decisions regarding our major assets and infrastructure. The plan considers the current state of Yukon Energy's core assets and identifies the reinvestment needed to ensure their best use. It assesses our long-term energy requirements and identifies options for meeting those future needs. We expect to present this plan to the Yukon Utilities Board in 2006

Included in our 20-year resource plan is a proposal to extend our Whitehorse/Aishihik/Faro grid from Carmacks to Stewart Crossing. This would connect Yukon Energy's two grids and give more flexibility in terms of power availability. It would also provide hydro power to new mining customers in the Central Yukon. In 2005 we began some preliminary work looking into the possibility of building a Carmacks to Stewart transmission line. This project will require meaningful consultation with First Nations and a recommendation from the Yukon Utilities Board.

Work continued this year on a new corporate structure for Yukon Energy, our parent company Yukon Development Corporation and our sibling the Energy Solutions Centre. This has led to greater accountability, transparency and simplicity of organizational structure.

2004 was a bargaining year at Yukon Energy and in 2005 a new three-year contract was implemented with our approximately 50 unionized employees.

In 2005 we became part of a national program aimed at eliminating workplace injuries and deaths among young Canadians. The Passport to Safety Program supports and encourages education and workplace-specific safety training for young people. Yukon Energy is promoting this program during the hiring process, and completion of the on-line test is an asset to young people applying for a job at our company.

For the fifth year in a row, Yukon Energy was recognized nationally for our efforts to reduce greenhouse gas emissions. We received a Gold Champion Level Reporter Award from the Canadian GHG Challenge Registry (formerly Canada's Climate Change Voluntary Challenge and Registry Incorporation), a non-profit partnership between industry and governments across Canada. We share this honour with only about 150 other Canadian companies.

As part of our commitment to the people and communities we serve, Yukon Energy awarded scholarships to ten outstanding post-secondary students in 2005. We completed the first full year of an apprenticeship and training benefits funding agreement with the Nacho Nyak Dun and Tr'ondëk Hwëch'in First Nations, as part of an agreement made while building the Mayo/Dawson City transmission line. We also made corporate donations worth more than \$72,000 to a wide variety of Yukon non-profit groups.

I would like to take this opportunity to thank our customers for their business and continued support. Thank you as well to the dedicated and hard-working staff at Yukon Energy.

WORK CONTINUED THIS YEAR ON A NEW CORPORATE STRUCTURE FOR YUKON ENERGY, OUR PARENT COMPANY YUKON DEVELOPMENT CORPORATION AND OUR SIBLING THE ENERGY SOLUTIONS CENTRE. THIS HAS LED TO GREATER ACCOUNTABILITY, TRANSPARENCY AND SIMPLICITY OF ORGANIZATIONAL STRUCTURE.

David Morrison
President and CEO

Established in 1987, Yukon Energy is a publicly-owned electrical utility that operates as a business, at arms length from the Yukon government. We are the main generator and transmitter of electrical energy in the Yukon and we work with our parent company Yukon Development Corporation to provide Yukoners with a sufficient supply of safe, reliable electricity and related energy services.

There are almost 15,000 electricity consumers in the territory. Yukon Energy directly serves about 1,700 of these customers, most of whom live in and around Dawson City, Mayo and Faro. Indirectly, we provide power to many other Yukon communities (including Whitehorse, Carcross, Carmacks, Haines Junction, Ross River and Teslin) through distribution to the Yukon Electrical Company Limited. Yukon Electric buys wholesale power from Yukon Energy and sells it to retail customers in the territory.

Yukon Energy has the capacity to generate 116 megawatts of power. Seventy five megawatts of that are provided by our hydro facilities in Whitehorse, Mayo and Aishihik Lake (40 megawatts at Whitehorse, 30 megawatts at Aishihik and 5 megawatts at Mayo), 39 megawatts by diesel generators (which we currently only use as back-up) and 0.8 megawatts by two wind turbines located on Haeckel Hill near Whitehorse.

Yukon Energy is regulated by the *Business Corporations Act*, the *Public Utilities Act* and the *Yukon Water's Act*.

Our headquarters are located near the Whitehorse Rapids hydro plant in Whitehorse, with community offices in Mayo, Faro and Dawson City.

VISION

Yukon Energy provides reliable and cost-effective energy services for customers throughout the Yukon.

MISSION

Provide a sufficient supply of safe, reliable electricity and related energy services to customers throughout the Yukon, while following sound business practices and demonstrating leadership in protecting the environment.

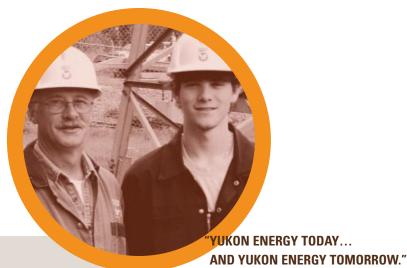

We undertake to:

- be responsive to our customers and their changing needs and expectations;
- · commit to the safety and development of our employees;
- be cost-effective in the utilization and investment of resources, always remembering that we are spending the customer's money and making long-term decisions;
- place priority on the fundamentals; that is, safe and reliable electrical services;
- demonstrate the value of Yukon-based public ownership and management;
- act ethically and honestly treating employees, customers and others with fairness, dignity and respect; and
- · build enduring relations with Yukon First Nations.

VALUES

Our actions and activities are guided by our core values:

- Commitment
- · Learning, Growth and Development
- Integrity
- Respect
- Effective Service
- Teamwork
- Safety
- Accountability

OUR EMPLOYEES

Yukon Energy employs approximately 68 highly skilled and dedicated people in Whitehorse, Faro, Mayo and Dawson City.

Yukon Energy invested generously in employee development in 2005, with 88 percent of our workforce receiving training opportunities.

Yukon Energy completed and ratified a new three-year collective agreement with our approximately 50 unionized employees. The agreement saw wage increases of 8.5 per cent over three years. Other elements of the deal include additional RRSP contributions by the company, increased location allowance and an increase in shift premiums.

Extensive work was done again this year on a new job classification plan. All union positions were re-classified in 2005 using an alternative system that's being utilized elsewhere in Canada and abroad. No employee will suffer any loss of pay as a result of this exercise.

It is important to Yukon Energy that we celebrate the achievements of our employees. We would like to congratulate our 12 employees who received Long Service Awards this year.

 Ron Kirkwood (father), Plant Operator and Calvin Kirkwood (son), summer student and

"I LOVE MY JOB AT YUKON ENERGY BECAUSE
OF THE VARIETY OF WORK AND THE PRIVILEGE
OF WORKING WITH A TEAM OF HIGHLY SKILLED
TRADES PEOPLE. MY ADVICE FOR ANYONE
WANTING EMPLOYMENT HERE IS TO ACHIEVE
THE NECESSARY QUALIFICATIONS AND PROPER
TRAINING AND THEN, WELCOME TO THE TEAM."

- Jim Petelski, Plant Operator

YUKON UTILITIES BOARD APPLICATION

The Yukon Utilities Board is the quasi-legal body that regulates utilities in the territory. In December 2004, Yukon Energy applied to the Utilities Board for a general review of our revenue requirements for 2005. A week of public hearings took place in April 2005 and the Board rendered its decision in October. Key elements of the decision are listed here:

DECISION APPLICATION ELEMENTS 1. No general rate increase Request approved 2. To fund its 2005 short-fall, Yukon Energy IST denied, but Yukon Energy can fund its asked approval to create an interest earning 2005 revenue shortfall from the Faro Mine detrust fund - to be called the Income watering deferral account. Also, the Diesel Stabilization Trust Account (IST) - and to Contingency Fund remains largely intact. transfer the balance in the Diesel Contingency Fund and the Faro Mine de-watering deferral account to that IST. 3. Re-classify the Faro mine rate to normal Request approved. General Service – Government Rate 4. The Secondary Sales Rate be set at The Secondary Sales Rate set at 66.7 percent of 70 percent of the price of fuel oil, and the the price of fuel oil. The request for a quarterly rates be adjusted quarterly to reflect the rate-setting mechanism is approved. current price of fuel. **5.** Permission to raise the allowed maximum the Request approved. utilities can spend on new residential customer hook-ups. For new general service customers, investment maximums would increase from \$180 per kilowatt of load to \$400 per kilowatt. **6.** For the purposes of setting rates, the Yukon Request approved. Utilities board must determine an allowed return on equity (ROE) for Yukon Energy. Yukon Energy proposed a ROE of 9.05 percent. 7. Allow \$29.789 million of the Mayo/Dawson Allowed rate base cost of \$28.996 million. Transmission Line costs to be put in rate base. A financial review of Yukon Energy is

necessary. The timing and scope will be determined later.

Reduce training by \$47,000 and Board of Directors expense by \$102,000.

^{*} More information about the Board decision can be found in Note #3 of this report's financial statements.

KEY ACTIVITIES

ELECTRICITY RATES

Yukon Energy was once again able to avoid increasing our firm rates in 2005. This is the ninth consecutive year that firm rates have remained stable.

Governments have over the years supported and even paid for a series of rate relief programs. These programs have been funded by government contributions or at times directly by the Yukon Development Corporation. In recent years the territorial government provided a \$10 million contribution to fund the Rate Stabilization program. This fund has now been depleted and the program is being operated from internal funds provided by the Yukon Development Corporation. The rate relief program has been extended until April 2007. The annual cost of the Rate Stabilization Fund is approximately \$3.6 million.

20-YEAR RESOURCE PLAN

A great deal of time was also spent in 2005 on a 20-year resource plan, which will guide Yukon Energy in making sound strategic and long-term decisions regarding our major assets and infrastructure. The plan, when complete, will consider the current state of Yukon Energy's core assets, how they are being maintained, and will identify the reinvestment needed to ensure their best use. It will assess our long-term (20 year) requirements and identify options for maintenance, life extension and replacement of existing facilities, and construction of new ones.

It will, for example, outline the possibilities for additional water storage in the Southern Lakes system, which could include raising the water level in Marsh Lake. It will look at whether it makes more economic sense to replace Yukon Energy's aging diesel turbines with new diesels, or instead to adopt other generating options, such as installing a third hydro unit at Aishihik. It will examine choices for supplying Whitehorse with electricity in the event of a failure on the Aishihik transmission line, from which we get most of our winter power.

Once completed in 2006, we will hold public consultation with Yukoners on the range of options under consideration. We will also request that the Yukon Utilities Board conduct a full review of the plan.

CARMACKS TO STEWART TRANSMISSION LINE PROJECT

Included in our 20-year Resource Plan is a proposal to extend our Whitehorse/Aishihik/Faro grid from Carmacks to Stewart Crossing. This would connect Yukon Energy's two grids and give more flexibility in terms of power availability. It would also provide hydro power to new mining customers in the Central Yukon. There are strong indications that both Minto and Western Silver will begin mining operations in the Pelly Crossing area within the next couple of years. With this in mind, Yukon Energy sought financial support in 2005 from the Yukon government to do planning and permitting work for a new transmission line from Carmacks to Pelly Crossing. Our hope is that the line would eventually extend to Stewart Crossing.

Yukon Energy if collaborating with the government to cover initial project planning. Yukon Energy expects to go back to the government for more funding in 2006. We believe the total bill for planning and permitting will be about \$3 million. This project will only go ahead after meaningful consultation with First Nations and only on the recommendation of the

Yukon Utilities Board. All environmental permits must be obtained before the transmission line is constructed. As well, this project will only move forward if Yukon government infrastructure funding ensures no adverse impact on ratepayers.

MAYO/DAWSON TRANSMISSION LINE

The Mayo to Dawson City transmission line, which has operated since the fall of 2003, involved building a 232 kilometre long transmission line and related infrastructure to connect the City of Dawson to the Mayo hydroelectric station. It has allowed Yukon Energy to supply Dawson with clean surplus hydro electricity (Dawson's diesel generators are now only used as emergency back-up) and has reduced greenhouse gas by 10,000 tonnes a year.

The project is a good one that will save Yukon electrical customers more than \$20 million over the life of the line. However it is significantly over its original budget estimate of \$27.2 million. The final cost of the line is expected to be about \$36.2 million. As a result we asked the Auditor General to conduct an audit, which was completed early in 2005. The audit identified a number of weaknesses in our internal operations and in general found that we did not apply good project management practices in the case of the Mayo/Dawson line construction.

Even before the audit was done, Yukon Energy recognized that changes needed to be made internally. We have as a result improved our capital project processes. A committee now reviews all capital project plans and makes recommendations to senior management for approval. Projects have detailed descriptions of scope and forecasted costs. We will now seek prior approval from the Yukon Utilities Board for all projects worth more than \$3 million.

Yukon Energy has developed new contracting policies and guidelines that have been approved by the Board of Directors.

We are still working to resolve a number of significant project-related legal disputes and claims with the general contractor.

On a related note, Yukon Energy fulfilled its training agreements with the First Nation of Nacho Nyak Dun and the Tr'ondëk Hwëch'in First Nation, as part of the Mayo to Dawson Transmission Line Benefits Agreement. Through this agreement, we provide each of the two First Nations up to \$15,000 a year for apprenticeship and training opportunities. The agreement is for 20 years with an option to renew for a further five years. We believe this is going a long way in helping the Tr'ondëk Hwëch'in and Nacho Nyak Dun achieve their training needs and is assisting members of the two First Nations to find meaningful employment.

STEWART TIE-IN

Yukon Energy, in cooperation with Yukon Electrical Company Limited, completed a project in the summer of 2005 to connect Stewart Crossing residents to the Mayo/Dawson transmission line. This tie-in with the Mayo/Dawson transmission line has allowed Stewart residents to switch to environmentally-friendly hydro power, thus displacing about 148,000 litres of fuel per year and reducing greenhouse gas emissions by 420 tonnes annually.

AISHIHIK BOAT LAUNCH/HERITAGE PROJECT

Yukon Energy is obligated to carry out certain activities each year to fulfill our water licenses. In 2005 we made improvements to the Aishihik Power Canal and built a board launch at the north end of Aishihik Lake. We also filed an updated heritage mitigation plan for the Aishihik area and a water license amendment regarding our Aishihik Lake control structure, to reflect Canadian Dam Safety guidelines.

WHITEHORSE GENERATOR REFURBISHING

Over the last few years we have allotted money to overhaul one hydro generator each year. In 2005 one of our four Whitehorse hydro turbines was refurbished. The refurbished unit was back on line by late July, two months after the work began. In 2006, one of our Aishihik hydro generators will receive an overhaul.

WIND ENERGY

To assess the potential for commercial wind generated power, Yukon Energy typically operates a few monitoring stations per year throughout the territory. In 2005, Yukon Energy had two stations on Ferry Hill near Stewart Crossing and a summertime-only station on Dawson City's East Dome. If there are encouraging results from Dawson City we will look at installing a year-round monitoring station there in the near future.

SECONDARY SALES

Currently Yukon Energy has the ability to produce more hydro-generated electricity than it needs for its customers. To take advantage of the economic and environmental benefits of this surplus power, the Corporation developed a Secondary Sales Program.

This program gives eligible Yukon businesses the option of using hydro power to heat their facilities instead of diesel fuel or propane, both of which are more expensive. However, there are some stipulations: the service is limited and is fully interruptible, and the business' existing heating system must be maintained and fully operational so that it can be re-activated on 24 hours notice. A second electrically fired heating system must be added in order to utilize the secondary sales electricity as a heating source. The business must also be located in an area that is served by hydro-generated power.

Yukon Energy received final approval from the Yukon Utilities Board effective January 1, 2005 to change the retail rate charged for secondary power to 66.7 percent of the cost of heating with diesel fuel (up from approximately 42 percent). The rate is also subject to a quarterly adjustment based on the actual Whitehorse cost of diesel fuel. In 2005 secondary energy sales increased by 14.6 percent from 2004, accounting for 6.6 percent of Yukon Energy's total energy sales.

FLEX-TERM NOTE

Yukon Energy's longstanding dispute with Indian and Northern Affairs Canada (INAC) regarding the interpretation of secondary sales under a flexible term note was resolved in 2005, through a buy-out of the note by the Yukon Development Corporation. This buy-out means the Yukon now has complete ownership of the power assets previously owned by the Northern Canada Power Commission. It also means that Yukon Energy can lock in the benefits of a very favourable financing deal for the long-term benefit of ratepayers.

GOVERNANCE

In terms of governance initiatives, Yukon Energy and our parent the Yukon Development Corporation (YDC) implemented a number of measures as part of improvements to our day-to-day business. A new Letter of Expectations was negotiated with the Minister that outlines specific priorities and performance expectations regarding the two corporations. As well, new protocols were established that clearly lay out the role of YDC as the sole shareholder of Yukon Energy. The Minister was also provided with the corporations' business plans and quarterly progress reports.

"WE BECAME A PASSPORT TO SAFETY EMPLOYER BECAUSE IN OUR BUSINESS, SAFETY HAS TO BE A PART OF EVERY DECISION WE MAKE AND EVERY ACTION WE TAKE."

 Ken Sawyer, Coordinator of Property and Projects with summer student Shawn Sederberg "YUKON ENERGY IS PROBABLY
ONE OF THE BEST KEPT SECRETS
IN TERMS OF REWARDING
EMPLOYMENT. THE WORK IS
VARIED, CHALLENGING AND
SATISFYING, AND THE STAFF
ARE GREAT TO WORK WITH.
I THINK THIS IS THE BEST JOB
I'VE EVER HAD!"

Janet Patterson,
 Supervisor of Communications

HEALTH AND SAFETY

SAFETY REVIEWS

Safety is a top priority at Yukon Energy. Safety reviews of all our dams were conducted in 2005, the results of which indicate our dams are in good shape. There are some minor improvements that we will look at addressing in the coming months. We also had an analysis done of our health and safety system. This analysis will help in identifying any weaknesses in our practices and procedures.

PASSPORT TO SAFETY

In 2005 Yukon Energy became part of a national program aimed at eliminating workplace injuries and deaths among young Canadians. The Passport to Safety Program supports and encourages education and workplace-specific safety training for young people. It offers an on-line test to help make teenagers and young adults aware of their rights and responsibilities regarding health and safety, and therefore better prepares them to keep safe while at work.

Yukon Energy is promoting this program during the hiring process, and completion of the on-line test is an asset to young people applying for a job at our company.

ENVIRONMENTAL STEWARDSHIP

GREENHOUSE GAS EMISSION REDUCTIONS

For the fifth consecutive year, Yukon Energy has been awarded the Gold Level Reporter award for tracking, reporting and reducing carbon dioxide emissions. This is an honor we share with only about 150 other companies across Canada. This award is from the Canadian GHG Challenge Registry (formerly the National Voluntary Climate Change Registry), a non-profit industry/government national partnership that works to address climate change.

WHITEHORSE RAPIDS FISHWAY

The Whitehorse Fishway, built at the same time as the dam (1958) to help migrating salmon bypass the dam to reach their spawning grounds, had another successful season this year. The fishway is owned by Yukon Energy and operated by the Yukon Fish and Game Association, and is one of the Yukon's most popular tourist attractions. Almost 30,000 visitors came to view the salmon this summer.

The facility was made even more enjoyable and educational this year with the addition of new interpretive panels and brochures, interactive games for children, and evening presentations organized by the Yukon government's Department of the Environment. For the second year in a row, First Nation elders were on hand twice a week in our interpretive tent to answer questions from the public, and the display material in the tent was expanded from last year. The tent and elders are proving to be a very popular addition to the facility.

There was a concerted effort this year to hire bilingual staff (English and French or English and German). It was the first time in the history of the fishladder that all the attendants were fluent in two languages.

As a pilot project this year, we produced a family season's pass for sale to the public. This was quite popular with local residents and we will offer the pass again next year.

In 2005, 2,632 salmon went through the fish ladder, compared with 1,992 last year

WHITEHORSE RAPIDS FISH HATCHERY

The Whitehorse Rapids Fish Hatchery began operating in 1984 to counteract the numbers of migrating Chinook salmon fry being affected by our power plant. In 1996 the hatchery was expanded to accommodate the Yukon government's fresh water fisheries program. Freshwater fish such as arctic char, lake trout, rainbow trout and bull trout are raised to stock pothole lakes in the southern Yukon, including Hidden, Long and Gloria Lakes among others.

Under a funding agreement with the Yukon government's Department of Environment, Yukon Energy and the government jointly and equally share the operating and maintenance costs of the hatchery, which in 2005 totalled approximately \$173,450.00.

R & D Environmental administers, manages and operates the facility year round by way of a contract with Yukon Energy.

"BEING A GUIDE AT THE WHITEHORSE
RAPIDS FISHWAY IS A REALLY GREAT
WORKING EXPERIENCE. I HAVE
LEARNED SO MUCH AND HAVE HAD THE
OPPORTUNITY TO MEET INTERESTING
PEOPLE FROM ALL OVER THE WORLD."

- Veronique Saint-Onge, Fishway summer student

In 2005 the freshwater component of the hatchery reared and released 65,696 kokanee salmon, 899 bull trout fry, 3,268 Arctic char, and 4,607 lake trout juveniles. In addition, 815 rainbow trout, 886 bull trout and 500 kokanee salmon juveniles were held at the hatchery for future stocking and/or for the brood stock program.

Alevins (baby fish) from the freshwater fall egg takes are as follows: 24,784 bull trout, 3,883 kokanee salmon, and 476 Arctic char. These fish will be moved into round tanks during the first two months of 2006.

The developed freshwater brood stock program consists of 49 bull trout adults, and 64 rainbow trout adults, which are being raised for future egg takes.

The chinook salmon component of the Whitehorse Rapids Fish Hatchery released 112,839 chinook fry into the upper drainage of the Yukon River above the Whitehorse dam. As of December 31, 2005 the hatchery was incubating an estimated 161, 843 chinook alevins which should be moved to tanks in February 2006.

FISH HABITAT PROTECTION

2005 was the sixth consecutive year of a long-term juvenile whitefish monitoring program at Aishihik Lake. This program was initiated in 1999 with the goal of preserving the lake whitefish population of Aishihik Lake and ensuring that no significant adverse effects to the lake whitefish fishery result from the operation of the Aishihik Hydro generating facility. A management regime is now in place to respond to any significant changes attributable to the hydro operations, at an early enough stage to minimize effects on the fishery.

CORPORATE CITIZENSHIP

ROTARY CENTENNIAL BRIDGE AND MILLENNIUM TRAIL

Yukon Energy has been a major supporter of the Millennium Trail - a paved walkway that stretches on either side of the Yukon River in the vicinity of the Corporation's Whitehorse hydro operation. It is the first trail in Whitehorse that is accessible to people in wheelchairs and has been used by hundreds of visitors and residents since it opened this year. In 2005 work was completed on a bridge that spans the Yukon River and joins the two sections of the trail to make a continuous loop. Yukon Energy has contributed approximately \$100,000 towards the trail and bridge.

OPPORTUNITIES NORTH CONFERENCE

Yukon Energy was a major sponsor in Opportunities North 2005, a pan northern business and investment conference designed to showcase the territory's economic potential and to foster economic partnerships. Government, First Nations and business delegates shared information concerning infrastructure and resource development. It was one of the largest business and investment conferences ever held in the Yukon.

FINANCIAL CONTRIBUTIONS TO NON-PROFIT GROUPS

Yukon Energy continues our tradition of sponsoring the good work of non-profit organizations throughout the territory. Through our corporate contributions program, we donated more than \$72,000 to 70 community groups in 2005. The list covered everything from sports and recreation, the arts, tourism, education, and health and social services. Here are a few examples of how we have helped community groups this year....

SCHOLARSHIPS

Yukon Energy, in conjunction with Yukon Development Corporation and the Yukon government's Bureau of French Language Services, continued our strong support for Yukon students. In 2005 the three entities provided scholarships worth \$15,100 to 10 deserving young adults. These scholarships are a significant investment in our communities and symbolize our ongoing belief in the potential of the young people in the territory. As well as offering general scholarships, members of the First Nation of Nacho Nyak Dun and the Tr'ondëk Hwëch'in First Nation are eligible to be considered for scholarships as part of our Mayo/Dawson Transmission Line Benefits Agreement.

COMMUNITY INVOLVEMENT

It is important to Yukon Energy that we participate actively in the communities we serve. In 2005, Yukon Energy took part in a Student Career Fair in the rural community of Haines Junction. The event drew students, parents and members of the general public from several Yukon communities.

One of our staff assisted with an electrical workshop at a Young Women Exploring Trades Conference that exposed about 120 grade eight girls to various trade-related career options.

Our employees are also very giving of themselves in their free time. Many staff members volunteer for a large variety of community organizations and events.

"A sincere thank you to Yukon Energy for your financial contribution to the 5th Annual Young Women Exploring Trades conference. Thank you as well for allowing one of your staff members to participate as a workshop volunteer. This kind of support from the Yukon's business community is what makes it possible for us to continue to promote the trades to our young people."

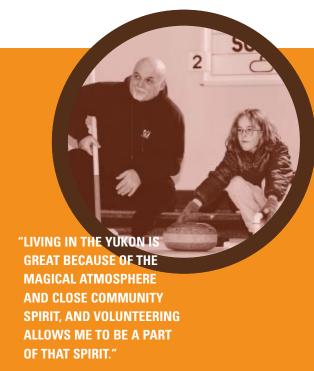

Betty Irwin, Coordinator of Yukon Women in Trades and Technology

"The Youth of Today Society, Blue Feather Youth Centre would like to thank Yukon Energy for your financial support towards our arts program. Because of your support we were able to provide many high-risk youth with the opportunity to pursue their creative desires. Because of Yukon Energy's contribution, today two of these young adults have employment in the arts."

Vicki Durrant, Executive Director, Youth of Today Society,
 Blue Feather Youth Centre

"For over a decade, Yukon Energy's corporate sponsorship of the Yukon Quest has helped our organization maintain a vital connection to traditional travel by dog team. Yukon Energy staff also work closely with Yukon Quest organizers to ensure a safe race trail is maintained on the Yukon River below the Whitehorse power dam."

- Stephen Reynolds, Manager, Yukon Quest International (Canada)

"FISH ARE MY INSPIRATION. THEY LIVE, GROW, DIE AND ALL THE WHILE THEY GIVE MUCH MORE THAN THEY TAKE. THEY ARE ONE OF THE FEW LIVING CREATURES I KNOW OF THAT NURTURE AND FEED ALL OTHERS WHO SHARE THEIR ENVIRONMENT. I FEEL VERY FORTUNATE BEING ABLE TO SHARE WITH OTHERS THE STORY OF THEIR AMAZING LIFE CYCLE."

Lawrence Vano, Operations Manager,
 Whitehorse Rapids Fish Hatchery

BOARD OF DIRECTORS

There were some changes at the board level in 2005. Board member Shirley Abercrombie left because of work commitments and was replaced by Greg Hakonson of Dawson City. The appointment of Board Chair Willard Phelps was extended for another year. Training for board members was a priority in 2005, with members enhancing their skills in corporate governance and financial literacy.

Willard Phelps, Chair Greg Hakonson
Martin Allen Paul Hunter
Fred Blanchard Pat Irvin

AUDITOR'S REPORT

To the Board of Directors of Yukon Energy Corporation

I have audited the balance sheet of Yukon Energy Corporation as at December 31, 2005 and the statements of income and retained earnings and cash flows for the year then ended. These financial statements are the responsibility of the Corporation's management. My responsibility is to express an opinion on these financial statements based on my audit.

I conducted my audit in accordance with Canadian generally accepted auditing standards. Those standards require that I plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In my opinion, these financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2005 and the results of its operations and its cash flows for the year then ended in accordance with Canadian generally accepted accounting principles.

Further, in my opinion, proper books of account have been kept by the Corporation and the financial statements are in agreement therewith and the transactions of the Corporation that have come to my notice during my audit of the financial statements have, in all significant respects, been in accordance with the Public Utilities Act and regulations, the Business Corporations Act and regulations, and the articles and the bylaws of the Corporation.

Sheila Fraser, FCA Auditor General of Canada

LYNDA HARLOW, ADMINISTRATIVE ASSISTANT

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

Management is responsible for the preparation of the financial statements and all other financial information relating to the Corporation contained in this annual report. The financial statements have been prepared in conformity with Canadian generally accepted accounting principles using methods appropriate for the industry in which the Corporation operates and necessarily include some amounts that are based on informed judgments and best estimates of management. The financial information contained elsewhere in the annual report is consistent with that in the financial statements.

Management has established internal accounting control systems to meet its responsibilities for reliable and accurate reporting. These systems include policies and procedures, the careful selection and training of qualified personnel and an organizational structure that provides for the appropriate delegation of authority and segregation of responsibilities.

The Board of Directors, through its Audit Committee, oversees management's responsibilities for financial reporting. The Audit Committee meets regularly with management and the independent auditor to discuss auditing and financial matters to assure that management is carrying out its responsibilities and to review the financial statements. The auditors have full and free access to the Audit Committee and management.

David Morrison President & CEO

Wendy Fendrick Acting Chief Financial Officer

WIND TURBINES ON HAECKEL HILL

DARRYEL COLLINS, WARFHOUSE **ADMINISTRATOR**

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

1. NATURE OF OPERATIONS

Yukon Energy Corporation (the "Utility") was incorporated under the Yukon Business Corporations Act and is a wholly-owned subsidiary of Yukon Development Corporation, a corporation owned by the Government of Yukon. Yukon Energy Corporation generates, transmits, distributes and sells electrical energy in the Yukon. The Utility is not subject to income taxes.

The Utility is subject to overall regulation by the Yukon Utilities Board ("YUB") and specific regulation by the Yukon Territory Water Board. Both boards are independent from the Utility.

All operations of the Utility are regulated by the YUB pursuant to the Public Utilities Act. There is no minimum requirement for the Utility to appear before the YUB to review rates. However, the Utility is not permitted to charge any rate for the supply of power that is not approved by an Order of the YUB. The Utility is subject to a cost of service regulatory mechanism under which the YUB establishes the revenues required (i) to recover the forecast operating costs, including depreciation and amortization, of providing the regulated service, and (ii) to provide a fair and reasonable return on utility investment on rate base. Whereas actual operating conditions may vary from forecast, actual returns achieved can differ from approved returns.

The regulatory hearing process used to establish or change rates typically begins when the Utility makes an application for its proposed electricity rate changes over the next one or two forecast years. The YUB must ensure that its decision, which fixes electricity rates, complies with all relevant legislation including the Public Utilities Act and directives issued by the Yukon Government through Orders-In-Council that specify how the interests of the customer and Utility are to be balanced.

The YUB typically follows a two-stage decision process. In the first stage, the total costs that the Utility will incur to provide electricity to its customers over the immediate future are approved. The approval of these costs determines the total revenues the Utility is allowed to collect from its customers. It is the responsibility of the YUB to examine the legitimacy of three classes of costs:

- the costs to the Utility to run its operations and maintain its equipment (personnel and materials);
- the cost associated with the amortization of all capital equipment; and
- the return on rate base (the costs related to borrowing that portion of rate base which is financed with debt, and the costs to provide a reasonable rate of return on that portion of rate base which is financed

As well, in the first stage, the YUB reviews the addition of costs to rate base and assesses these costs to ensure they are prudent.

In the second stage, the YUB approves how the revenue will be raised. This stage essentially determines the electricity rates for the various customer classes in the Yukon: residential, government, commercial and industrial. This process is guided mainly by requirements of Yukon Government Order-in-Council 1995/90 and can include a cost-of-service study which allocates the overall utility's cost of service to the various customer classes on the basis of appropriate costing principles.

Normally, the Utility applies for rates in advance of the applicable years. The last rate application was for the 2005 year. Interim hearings may be used between rate applications to deal with unforeseen circumstances which could result in the use of interim rates or riders until the next rate application when rates are reviewed and set as final.

(tabular amounts in thousands of dollars)

Water Regulation

The Yukon Territory Water Board pursuant to the Yukon Waters Act decides if and for how long the Utility will have a water license for the purposes of operating hydro generation stations in the Yukon. The licenses will also indicate terms and conditions for the operation of these facilities.

Capital Structure

The Utility's policy is to maintain a relatively constant capital structure of 60% debt and 40% equity. Annual dividends are paid to the parent and typically loaned back in order to maintain this ratio.

2. SIGNIFICANT ACCOUNTING POLICIES

Financial Statement Presentation

Effective December 31, 2005, the Utility retroactively adopted the Canadian Institute of Chartered Accountant's guideline 19 pertaining to the disclosure and presentation of information by entities subject to rate regulation. This change in presentation had no effect on the Utility's current or prior year net income or retained earnings. Impacts of accounting for rate regulated operations are further described in Note 3.

The financial statements of the Utility have been prepared by management. They conform to Canadian generally accepted accounting principles ("GAAP") and take into account generally accepted methods and practices of regulatory bodies. The regulatory accounting policies adopted by the Utility may differ from the accounting policies otherwise expected using GAAP. In particular, the timing of the Utility's recognition of certain assets, liabilities, revenues and expenses as a result of regulation may differ from that of a non-regulated enterprise (see Note 3). Consequently, the significant accounting policies have been classified accordingly in the notes below:

Rate regulated accounting policies

Property, plant and equipment

The Utility capitalizes an allowance for funds used during construction ("AFUDC") at the weighted average cost of capital. Upon retirement or disposal, any gain or loss is charged to income in the current year for assets depreciated on an individual basis, or charged to accumulated depreciation for assets depreciated on a pooled basis.

Regulatory liabilities

Regulatory liabilities represent amounts ordered by the YUB to be held by the Utility on behalf of ratepayers. Typically these amounts are either refunded to the customers or applied to ratepayer deficits through the rate setting process.

Reserve for uninsured losses

As a means of self-insurance, the Utility maintains a reserve for uninsured losses. The reserve is maintained through an annual provision approved by the YUB and collected through customer rates. Variances between the approved annual provision and actual costs incurred are deferred until the following general rate application or until a specific application is made to the YUB requesting recovery from or refund to customers.

PLANT OPERATOR
JIM PETELSKI WORKING
ON ONE OF THE
AISHIHIK TURBINES

PLANT OPERATOR RON KIRKWOOD ANSWERS A STUDENT'S QUESTION **DURING A PLANT TOUR**

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

Deferred charges

Deferred charges are recorded at cost less accumulated amortization.

Cost of feasibility studies and infrastructure planning are amortized on a straight-line basis over five and ten years respectively.

Regulatory hearing costs are amortized on a straight-line basis over three years.

Other deferred charges are amortized to earnings on a straight-line basis over various terms approved by the Yukon Utilities Board.

Regulatory provision for future removal and site restoration costs

The Utility maintains a reserve for the future removal of property, plant and equipment and the costs of site restoration related to those assets. The costs of demolishing, dismantling, tearing down, or otherwise disposing of the asset and site restoration, net of actual recoveries, are deducted from this account when they do not relate to an asset retirement obligation.

Deferred revenue

Deferred revenue represents a gain on fire insurance proceeds received related to a fire at the Whitehorse Rapids Generating Station in 1997. The gain is being amortized to income at the same rate as the replacement assets.

Diesel contingency fund

The Utility maintains a trust asset and an offsetting trust liability on behalf of ratepayers. The trust is used to reimburse the Utility for costs associated with diesel generation required when there is not sufficient water for hydraulic generation to meet demand. The Utility is required to file an annual report with the YUB on the fund's activity.

Generally Accepted Accounting Principles

Cash equivalents

Cash equivalents represent short-term highly liquid investments and are carried at cost.

Revenue recognition

All revenues are recognized in the period earned. Revenue from the sale of power is recognized based on cyclical meter readings. Sales of power includes an accrual for electricity deliveries not yet billed.

Materials and supplies

Diesel fuel, materials and supplies are recorded at average cost. Obsolete materials and supplies are recorded at salvage value in the period when obsolescence is determined.

Property, plant and equipment

Property, plant and equipment is stated at cost which includes materials, direct labour, a proportionate share of directly attributable administration overhead, and finance charges capitalized during construction, less accumulated amortization.

(tabular amounts in thousands of dollars)

Amortization is based on the straight-line method over the estimated economic life of the assets as follows:

Hydro-electric plants 30 to 65 years Diesel plants 25 to 45 years Wind Turbines 30 years 40 to 50 years Transmission Distribution 25 to 40 years Buildings 20 to 40 years Transportation 9 to 31 years Other equipment 5 to 20 years

Asset retirement obligations

On an annual basis, the Utility identifies legal obligations associated with the retirement of tangible longlived assets. Where a reasonable estimate of the fair value of these obligations can be determined, the total retirement costs are to be recorded as a liability at fair value, with a corresponding increase to property, plant and equipment.

The Utility has determined that it has tangible long-lived assets with associated future legal obligations for retirement. As the Utility anticipates using the assets for an indefinite period, the date of removal of these assets cannot be reasonably determined, and therefore an asset retirement obligation has not been recorded. When the timing and amount of the retirement can be reasonably estimated, an asset retirement obligation and the corresponding increase in property, plant and equipment asset will be recognized.

Contributions in aid of construction

Certain property, plant and equipment additions are made with the assistance of cash contributions from customers or capital assistance from the Utility's parent. These contributions are amortized to income on the same basis as the assets to which they relate. Amortization of contributions from customers is netted on the statement of income against amortization expense while amortization of capital assistance from the parent is disclosed separately under Other income.

Deferred water licensing costs

Costs related to obtaining water license renewals are deferred and amortized to earnings on a straight-line basis over the term of the license. The Utility operates its hydro generation facilities under three separate water licenses, with terms ranging from 17 to 25 years.

Employee pension plan

The Utility has a defined benefit pension plan which provides for pensions based on length of service and final average earnings. The cost of pension benefits is actuarially determined using the projected benefits method, prorated on service, and reflects management's best estimates of investment returns, wage and salary increases, and age at retirement. Adjustments resulting from the plan enhancements, actuarial gains and losses, and changes in assumptions are amortized over the expected average remaining service period of active employees. Pension costs include the current cost of service and amortization of past service benefits and plan enhancements, and actuarial gains and losses. Amortization is on a straight-line basis over the expected average remaining service period of active employees, which is currently 14 years. The transitional asset that arose when this policy was first applied is amortized over the average remaining service period of active employees expected to receive benefits under the benefit plan as of January 1, 2000.

THE WHITEHORSE RAPIDS DAM

AL PORTER, **ELECTRICIAN**

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

Measurement uncertainty

The preparation of financial statements in accordance with Canadian GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. This mainly affects revenue, accounts receivable, property, plant and equipment, asset retirement obligations, and employee pension obligations. Actual results could differ by a significant amount from these estimates.

Management's estimates and assumptions, especially those affecting the reported amounts of assets and the Utility's ability to recover the cost of these assets through future rates, are subject to decisions of the Yukon Utilities Board as described in Note 3.

3. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

Certain items in these financial statements are accounted for differently than they would be in the absence of rate regulation.

Where regulatory decisions dictate, the Utility defers certain costs or revenues as assets or liabilities on the balance sheet and records them as expenses or revenues in the statement of income as it collects or refunds amounts through future customer rates. Any adjustments to these deferred amounts are recognized in earnings in the period that the YUB renders a subsequent decision.

Regulatory assets represent future revenues associated with certain costs, incurred in the current period or in prior periods, which are expected to be recovered from customers in future periods through the rate-setting process. Regulatory liabilities represent future reductions or limitations of increases in revenues associated with amounts that are expected to be refunded to customers as a result of the rate-setting process.

(tabular amounts in thousands of dollars)

The following describes each of the circumstances in which rate regulation affects the accounting for a

	2005	2004	Expected remaining recovery/ settlement (years)	In the a Rate Regu Utility's Ne would have	et Income

	16,383	16,979		5	(596)
Net impact	\$ (13,264)	\$ (14,823)		\$	(1,559)

(a) Deferred charges

Deferred charges represent costs which have been deferred and are being amortized over various periods. In the absence of rate regulation, GAAP would require such costs to be recognized in the year incurred.

Feasibility studies

The costs of determining the feasibility of future capital projects that did not result in a capital project are deferred and amortized over five years as approved in the Utility's 1991/92 General Rate Application and re-confirmed in YUB Order 2005-12. Infrastructure planning costs are amortized over ten years as approved by YUB order 2005-12. In the absence of rate regulation, expenses in 2005 would have been \$632,000 higher.

Downsizing costs

Costs incurred to assist in downsizing the Utility's workforce are capitalized and amortized to expense over seven years as approved in the Utility's 1993/94 General Rate Application and reconfirmed in YUB Order 2005-12. In the absence of rate regulation, expenses in 2005 would have been \$48,000

WIND MONITORING **FACILITY ON FERRY HILL**

PAT MARCOFF, INSTRUMENT ELECTRICIAN

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

Hearing costs

The Utility incurred \$1,133,000 in costs associated with the YUB regulatory proceedings held in 2005. These costs consist primarily of legal and consulting costs incurred by the Utility of \$851,000 and reimbursement of YUB and intervener costs of \$282,000. YUB Order 2005-16 directed the Utility to reimburse the YUB and interveners for costs they incurred in the amount of \$282,000. YUB Order 2005-17 disallowed \$200,000 of the \$851,000 of costs incurred by the Utility. The disallowed amount has been recorded as Administration expenses in the current year. YUB Order 2005-12 directed the Utility to defer and amortize the approved hearing costs of \$933,000 over 3 years commencing January 1, 2005. In the absence of rate regulation, expenses in 2005 would have been \$297,000 higher.

Dam safety review

The Utility has a program of conducting reviews of the safety of its dams in accordance with standards set by the Canadian Dam Association. External consultants are hired every five years with intermittent costs incurred in the interim periods. These costs are amortized over five years as approved by the Utility's 1991/92 General Rate Application and reconfirmed in YUB Order 2005-12. In the absence of rate regulation, expenses in 2005 would have been \$63,000 higher.

(b) Diesel contingency fund

The Diesel contingency fund ("DCF") was established by YUB Order 1996-6 through the Negotiated Settlement process. The DCF is administered by the Utility on behalf of the YUB, and as such is recorded as a trust asset and a trust liability. The DCF attracts interest based upon short-term bond rates in which the Utility invests the funds held in trust. Any negative balance attracts interest at the lowest short-term borrowing rate available to the Utility through its line of credit. Pursuant to YUB order 1996-6, the Utility from time to time is required to transfer amounts to or from the trust it maintains on behalf of ratepayers to reimburse the Utility for costs associated with diesel generation required when there is not sufficient water for hydraulic generation to meet demand. As directed by Board Order 2002-3, the current balance of the DCF consists of the fire insurance gain of \$744,000, realized as part of the settlement of the insurance claim arising from the fire at the Whitehorse Rapids Generating Station, plus interest earned on the funds held in trust. In the absence of regulation, GAAP would have required the amounts transferred to and from the DCF, and any interest earned or incurred to be included in the Utility's net income in the year in which they occurred. In the absence of rate regulation, the Utility's net income in 2005 would have been higher by \$19,000 from interest earned on the DCF.

(c) Regulatory liabilities

Anvil Range Mine dewater revenue

As directed by YUB Order 1998-5, all revenues, less any incremental costs to provide the service, collected from Anvil Range Mine under Rate Schedule 34 (Faro Mine Firm Shutdown Power) prior to December 31, 2004, were deferred for the benefit of ratepayers pending direction from the YUB. YUB Order 2005-12 confirmed that effective January 1, 2005 the Anvil Range minesite would be charged the General Service-Government rate so there will be no further increases to dewatering revenue. This order also enables the Utility to draw down on the Anvil Range dewater revenue to fund its approved 2005 revenue shortfall XYUB Order 2005-17 set the approved 2005 revenue shortfall at \$292,000. In the absence of rate regulation, GAAP would have required only the recognition of actual sales earned during the year. As a result, the Utility's sales of power in 2005 would have been \$292,000 lower. The period over which the remaining liability will be recognized as revenue for the benefit of ratepayers is dependent on future YUB Board orders and, therefore, cannot be estimated.

(tabular amounts in thousands of dollars)

Insurance proceeds held for ratepayers

Insurance proceeds held on behalf of ratepayers represents the residual balance of insurance proceeds after allocation against all reconstruction and operation and maintenance costs related to a fire at the Whitehorse Rapids Generating Station in 1997, pursuant to Board Order 2002-3. As directed by YUB Order 2005-12, the insurance proceeds of \$744,000 were applied to the reserve for uninsured losses deficit during the year. In the absence of rate regulation, the insurance proceeds would have been included in income in the year received. The impact on current year net income would be \$0.

(d) Deferred revenue

The deferred gain on fire insurance proceeds relates to a fire at the Whitehorse Rapids Generating Station in 1997 which, pursuant to Board Order 2000-3, is being amortized to income at the same rate as the replacement assets. In the absence of rate regulation, GAAP would have required the gain to have been completely recognized as income in the year received. As a result, the Utility's current year net income would have been lower by the amount of the amortization of \$270,000.

(e) Reserve for uninsured losses

The YUB has approved the use of a reserve for uninsured damages and injuries as a means of self-insurance. The reserve is maintained through an annual provision approved by the YUB. In order to eliminate the deficit rate payers held as a result of uninsured losses, the Utility was directed by YUB Order 2005-12 to transfer the insurance proceeds being held on behalf of rate payers of \$744,000 to the reserve for uninsured loss, and increase the annual provision from \$50,000 to \$100,000 for the years 2005 to 2007. The annual provision will revert back to \$50,000 unless the YUB subsequently orders otherwise. In the absence of rate regulation, GAAP would require costs to be expensed as incurred and, therefore, expenses in 2005 would have been lower by \$86,000. The period over which the reserve will be recovered is dependent on the magnitude of future actual losses incurred and cannot be estimated.

(f) Regulatory provision for future removal and site restoration costs

Pursuant to depreciation rates approved by the YUB in the Utility's previous general rate applications, under section 23(1)(b) of the Public Utilities Act, the Utility has maintained a reserve for future removal and site restoration costs. As a result of the YUB Order 2005-12, effective January 1 2005, the Utility is required to maintain this reserve as a regulatory provision in addition to any asset retirement obligations. The provision is not to exceed the cumulative value of the provision at December 31, 2004 of \$5,757,000. In the absence of rate regulation, GAAP would have required the Utility to reverse the reserve to retained earnings in 2004. YUB Order 2005-12 also directs the Utility to notify interveners and interested parties when the balance of the provision reaches \$2,000,000. Costs of dismantling capital assets, including site remediation, will be applied to this regulatory liability if they do not otherwise relate to an asset retirement obligation. In a non-regulated industry, future removal and site restoration costs would be limited to asset retirement obligations, and the removal and site restoration costs would be imited to asset retirement obligation. In the absence of rate regulation, the Utility's 2005 expense would have been higher by the amount of actual removal and site restoration costs incurred in the year of \$139,000. The period over which the provision will be settled is dependent on the future costs of demolishing, dismantling, tearing down, or otherwise disposing of the asset, and site restoration net of actual recoveries, and is, therefore, indeterminate.

YUKON ENERGY'S
MAYO HYDRO FACILITY

TARA SCHULTZ, DRAFTSPERSON

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

Other items affected by rate regulation

The Utility is required under the Public Utilities Act to obtain prior approval from the YUB before making changes to depreciation, amortization, and depletion rates and methods. The YUB permits an allowance for funds used during construction ("AFUDC"), based on the Utility's weighted average cost of capital, to be included in the rate base. AFUDC is also included in the cost of property, plant and equipment for financial reporting purposes, and is depreciated over future periods as part of the total cost of the related asset, based on the expectation that depreciation expense, including the AFUDC component, will be approved for inclusion in future customer rates. Since AFUDC includes not only an interest component, but also a cost-of-equity component, it exceeds the amount allowed to be capitalized in similar circumstances in the absence of rate

It is the Utility's policy to charge to income, in the year of disposal, any gain or loss upon retirement or disposal of land or vehicles. As approved by the YUB, the gain or loss on all other property, plant and equipment is charged to accumulated depreciation and deferred and amortized over the expected life of the remaining pool of similar assets. In the absence of rate regulation, GAAP would require the gain or loss on the disposal or retirement of all property, plant and equipment to be included in income in the period of disposal or retirement.

YUB Order 2005-12 disallowed capital costs related to the Mayo-Dawson transmission line in excess of \$28,996,000. As a result of the YUB order, the Utility wrote down the value of property, plant and equipment related to the Mayo-Dawson transmission line by \$1,224,000 in 2005. \$554,000 related to costs incurred to correct deficiencies and have been recorded as Operations and maintenance costs (line and substation costs). \$671,000 related to legal costs incurred to pursue claims and counter claims against the general contractor and have been recorded as Administration (General office and governance costs). In the absence of rate regulation, net income would not change as GAAP would also require the Utility to record the write-down. Additionally, YUB Order 2005-12 disallows the Utility from earning a return on any additional costs incurred with respect to the Mayo Dawson line as a result of pursuing any claims or counter claims against the general contractor and directs the Utility to record any recoveries from the general contractor in an interest bearing deferred account for future review and disposition by the YUB.

The Utility's policy of maintaining a constant capital structure of 60% debt and 40% equity is reviewed by the YUB as part of the rate setting process and in the determination of the return on rate base. In the absence of rate regulation, the Utility would determine the appropriate capital structure solely based on decisions by the Board of Directors of the Utility, which may differ from the current policy.

All amounts maintained as regulatory assets and liabilities are expected to be recovered or settled over the periods noted above. However, there are risks and uncertainties associated with the recovery or settlement related to potential future decisions of the regulator.

(tabular amounts in thousands of dollars)

Rate decision

On October 18, 2005, the YUB issued YUB Order 2005-12 related to the Utility's revenue requirements application dated December 13, 2004 which includes the Utility's 2005 fiscal year. The Utility's application requested changes to certain regulated accounts: the rate charged for Rate Schedule 32 (Secondary Energy); and the elimination of Rate Schedule 34 (Faro Mine Firm Shutdown Power). As a result of YUB Order 2005-12 and related follow-up decisions, effective January 1, 2005, the Utility is entitled to a rate of return on common equity of 9.05%. The major items contained in these decisions are:

- (a) to set rates for residential and commercial customers as permanent effective January 1, 2005;
- (b) to apply amounts currently recorded as regulatory liabilities in the Anvil Range Mine dewater revenue deferral account, to offset 2005 revenue shortfalls totaling \$292,000. Additional amounts up to \$292,000 per year can be ordered by the YUB for 2006 and 2007;
- (c) to apply the \$744,000 balance of the regulatory liability recorded as insurance proceeds held for ratepayers against the reserve for uninsured losses deficit;
- (d) to increase the annual appropriation to the reserve for uninsured losses to \$100,000 for each of the 2005, 2006 and 2007 years;
- (e) implementation of new depreciation rates with the cumulative prior years impact of the rate change amortized to income over the average remaining life of the assets;

 (f) discontinue the annual provision for future removal and site restoration, and notify interveners and
- interested parties when the balance reaches \$2,000,000;
- (g) limit the inclusion of Mayo Dawson transmission line costs in the Utility's rate base to \$28,996,000;
- (h) to disallow any further costs incurred on the Mayo Dawson line related to claims and counter claims between the general contractor and the Utility;
- to record recoveries received with respect to claims and counterclaims between the utility and the general contractor in an interest bearing deferral account with the future disposition of the balance in the account to be determined by the YUB;
- to defer \$650,000 of the \$851,000 direct costs incurred by the Utility related to the hearing costs account (as forecast in the November 17, 2005 compliance filing submitted to the YUB) and amortize equally over 3 years commencing January 1, 2005;
- (k) to pay \$282,000 to the YUB and interveners for their costs incurred to participate in the hearing, and to include this amount in the deferred hearing costs account to be amortized equally over three years commencing January 1, 2005;
- elimination of rate schedule 34 (Faro Mine Shutdown Firm Power);
- (m) approval of an automatic quarterly rate setting mechanism for rate schedule 32 (Secondary Energy), whereby the Utility sets the rate on a quarterly basis at 66.7% of the avoided price of fuel oil and is required to provide the YUB with notification of the quarterly rate change; and
- (n) to refund to secondary energy customers the difference of \$45,000 between the interim and permanent rates, plus interest of \$1,000.

13. LONG-TERM DEBT

The Utility's long-term debt is summarized as follows:

The duty of only term deat to deliminately as follows.	2005		2004
Government of Canada \$40,000,000 flexible term note bearing interest at 7% repayable in annual installments of up to \$1,000,000 principal, plus accrued interest and secured by mortgage over specific assets \$		S	28.278
Yukon Development Corporation \$40,000,000 flexible term note bearing interest at 7% repayable in annual installments of up to \$1,000,000 principal, plus accrued interest and secured by mortgage		ň	20,210
over specific assets \$27,313,661 term note bearing interest at 5.88%, payable monthly, and semi-annual principal payments commencing June 30, 2007 and ending December 31, 2023. The note is unsecured.	27,867		27,314
\$18,000,000 flexible term note related to the Mayo to Dawson Transmission Line project bearing interest at 6.55% repayable in annual installments of \$450,000 principal, plus accrued interest with the balance of \$307,000 due December 31, 2043. The note is unsecured.	16.957		17,407
Unsecured advance bearing interest at 6.03%, due one year after demand	3,649		3,649
Unsecured advance bearing interest at 5.403%, due one year after demand	2,839		-
TD Canada Trust \$12,400,000 term note bearing interest at 7.81% payable in monthly installments of \$102,000 interest and principal, with the balance due September 30, 2011. The note is guaranteed by the Yukon Government.	8,942		9,449
Less current portion	87,568 1,454		86,097 1,340
\$	86,114	\$	84,757

\$40,000,000 Flexible term note

The Government of Canada flexible term note was purchased by Yukon Development Corporation (the Utility's parent) on March 30, 2005 with all existing terms and conditions remaining the same. The terms of the flexible term note provide for payments of principal and interest to be deferred and abated, respectively, if power sales on the Whitehorse-Aishihik-Faro electrical power distribution system are less than specified amounts. After adjusting for abated interest, the effective interest rate on this instrument for 2005 is 2.90% (2004 - 2.86%).

AISHIHIK HYDRO TURBINES

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

Mayo - Dawson Transmission Line Financing

The Utility obtained financing from its parent in the amount of \$18 million for a transmission line from the Mayo hydro generating station to Dawson City. The financing was obtained effective September 6, 2003, the date the transmission line came into service. The financing was made under terms that ensure that ratepayers are not paying more in any year than they would otherwise have paid if the transmission line had not been built and Dawson City had continued to be served by diesel generation. The maximum interest payable on the note in any year is determined by a formula which compares the costs and benefits of operating the line. For example, the costs include depreciation, return on equity, and operating and maintenance expense. The benefits include diesel fuel costs not incurred. As per the agreement, total costs, including interest, cannot exceed the benefits.

If the costs of operating the line exceed the benefits in any year, Yukon Development Corporation will pay Yukon Energy Corporation the difference on or before March 31 of the next calendar year.

In 2005, benefits exceeded costs, which resulted in \$1,140,000 in interest paid to Yukon Development Corporation. (In 2004, costs exceeded benefits by \$241,000 and YDC was required to pay this amount to the Utility.)

Long -term debt repayment

Scheduled repayments for all long-term debt are as follows:

2006	S	1,454
2007		3,127
2008		3,190
2009		3,270
2010		3,349
Thereafter		73,178

\$ 87,568

Fair value

Fair value at December 31, 2005 of \$101 million (2004 - \$98.2 million) for all long-term debt was estimated using discounted cash flows based on an estimate of the Utility's current borrowing rate for similar borrowing arrangements.

STEVE BLYSAK, **CONTROL CENTRE OPERATOR**

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

The transactions are in the normal course of operations and are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Revenue from related parties is reported as Other revenue on the statement of income. The corresponding cost of providing these services is reported as part of administration expense on the statement of income.

Rate stabilization fund revenues are received from the parent in accordance with terms established by the Government of Yukon, which established the fund to protect certain ratepayers by minimizing the impact of rate increases. These revenues are reported on the statement of income as a component of sales of power.

Interest on long-term debt is included on the income statement under Other expenses.

Rural Electrification Support Program funds are received from the parent and are recorded as an offset to the capitalized cost of the respective project.

At the end of the year, the amounts receivable from and due to related entities are as follows:

		2005		2004
Direct parent company				
Accounts receivable	\$	136	\$	574
Accounts payable	\$	5	S	6
Current portion of long-term debt	\$	904	S	450
Long-term debt	\$	77,722	\$	47,920
Wholly-owned subsidiary of parent company				
Accounts receivable	S	40	S	63
Accounts payable	S	8	S	-

These balances are non-interest bearing and payable on demand except for long-term debt (Note 13).

17. PENSION COSTS AND OBLIGATIONS

The Utility sponsors a defined benefit pension plan which provides benefits based on length of service and final average earnings as follows:

- years of pensionable service;
- the average annual earnings during any 5 consecutive years of pensionable service where earnings are the highest; and
- the average of the years maximum pensionable earnings (Canada Pension Plan) for the same 5-year

Annual cost of living increases to a maximum of 3.00% are provided to pensioners. The Utility contributes amounts as recommended by an independent actuary.

Employees make contributions to the plan as follows:

- 3.5% of earnings up to the year's maximum pensionable earnings
- 5.0% of earnings in excess of year's maximum pensionable earnings to a maximum of \$2,500 per year.

(tabular amounts in thousands of dollars)

The Utility has contracted with external organizations to provide services of trustee, administrator and investment manager for the pension plan.

An actuarial valuation for funding purposes was performed as of January 1, 2004 by the consulting actuarial firm AON Consulting Inc. The next valuation for funding purposes will be conducted as of January 1, 2007. The pension costs and obligations were based on the data used in the January 1, 2004 funding valuation and have been projected to December 31, 2005 in accordance with generally accepted actuarial standards.

The fair value of the plan assets is based on market values as reported by Royal Trust, the plan's custodian as at December 31, 2005. The plan assets are invested in a pooled balanced fund. The distribution of assets by major asset class is as follows:

	December 31, 2005	December 31, 2004
Equities	62.4%	60.5%
Fixed Income Securities	34.6%	30.1%
Short Term Securities and Cash	3.0%	9.4%

Information about the Utility's defined benefit plan as at December 31, in aggregate, is as follows:

		2005		2004
Discount rate-accrued benefit obligation		5.25%		6.00%
Discount rate-benefit costs		6.00%		6.50%
Expected long-term rate of return on plan assets		6.50%		6.50%
Assumed rate of salary escalation		3.00%		3.00%
Assumed rate of pension indexing		2.50%		2.50%
Expected average remaining service period of active employees		14 years		14 years
Benefit obligation determined by actuarial valuation	S	8,269	S	6.282
Fair value of plan assets	100	6,144	15.4	5,371

Employee contributions	\$	110	5	132
Benefits paid	S	97	S	299

The accrued benefit liability has been recorded on the Utility's books of account and is included in accounts payable on the balance sheet.

SENIOR POWERLINE TECHNICIAN CLINT KELLAND

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

Employees joining the Utility after January 1, 2002 are not eligible to participate in the defined benefit plan. The Utility makes contributions to a Registered Retirement Savings Plan ("RRSP") on behalf of these employees and employees hired before January 1, 2002 who belonged to the defined benefit plan and elected to opt out of that plan. The RRSP is a defined contribution plan. The costs recognized for the period are equal to the Utility's contribution to the plan. During 2005, these were \$122,000 (2004 - \$105,000).

Total cash payments for employee future benefits for 2005, consisting of cash contributed by the Utility to its funded defined benefit pension plan and cash contributed directly to the RRSP were \$428,000 (2004 - \$425,000)

As at December 31, 2005, the Utility's defined pension plan had 40 members (2004 - 41), and the RRSP had 33 members (2004 - 34).

18. CONTINGENCIES

(a) Mayo to Dawson City transmission line project

As discussed in Note 6, the Utility completed the construction of the Mayo to Dawson City Transmission Line project during 2003. Subsequent to energization of the line, the Utility and the general contractor notified each other that they have numerous claims arising out of the agreement and the construction of the line. These claims total several million dollars on a net basis. To date, no legal action has commenced.

In April 2005, the contractor provided the Utility with some additional information. Management is reviewing this information and anticipates further documentation will be required before claims can be fully assessed. Once the documentation stage is complete, the parties will meet to select an appropriate legal process to resolve the outstanding issues. To date, the Utility has not received sufficient information to assess the Utility's exposure.

(b) Federal transfer agreement

Most of the assets of the Utility were purchased under a March 31, 1987 Agreement of Purchase and Sale between the Government of Canada ("Canada"), Yukon Energy Corporation, the Government of Yukon ("YTG") and Northern Canada Power Commission ("NCPC") (the "Transfer Agreement"). There are several claims that the Utility has against Canada under the Transfer Agreement. The various claims are described below:

Yukon Energy Corporation claims against Canada

Claim against Canada Arising from Requirement to Obtain a Fish Authorization in Relation to the Aishihik Facility

In January, 2004, the Utility filed a Writ of Summons against Canada for damages caused by a breach of the Transfer Agreement arising from Canada's notification of the Utility in May, 1999 that the Alshihik Facility required an authorization under the Fisheries Act. The Utility alleges the requirement for a fish authorization was contrary to Canada's representations and warranties under the Transfer Agreement. More particularly it alleges it reasonably relied on warranties and representations given by Canada under the Transfer Agreement to the effect that the Utility had all authorizations necessary for the generation of electricity from the Alshihik Facility. As a result, the Utility incurred significant costs and expenses in negotiating and obtaining a Fisheries Act authorization for the Alshihik Facility has been restricted by the terms of the authorization. It is expected that a legal process will be initiated in 2006, resulting in damages being awarded to the Utility which can not be reasonably estimated at this time.

(tabular amounts in thousands of dollars)

(ii) Soil Contamination at the Whitehorse Facility

The Utility has notified Canada of a claim it has for indemnification for expenditures it incurred on site restoration at the Whitehorse Rapids Dam site for hydrocarbon contamination caused by a diesel fuel spill which occurred when Canada owned the facility. This contamination was discovered in 1999 and was rectified in 2000. In addition, further testing in 2004 revealed one additional area of contamination caused during Canada's ownership of the site. The Utility's claim of approximately \$260,000 for indemnification arises under the Transfer Agreement. It is expected that this matter will be resolved in

19. COMMITMENTS

(a) Aishihik Water Licence

The Yukon Territory Water Board issued a water use license in 2002, valid until December 31, 2019, for the Utility's Alshihik Lake facility. In addition to maintaining a minimum and maximum water level, this license commits the Utility to meet a number of future requirements including:

- a) annual payments of \$25,000 until 2011 for the purpose of construction and maintenance of a
- heritage camp and delivery of programs at the camp;
 b) a Heritage Mitigation Plan. The Utility spent approximately \$35,000 in 2005 on heritage projects, expects to spend up to \$50,000 in 2006 and \$30,000 in 2007 on heritage projects, and the balance which has not yet been determined in the future; and
- c) annual fish monitoring programs.

Fish monitoring programs are also required under an authorization provided by Canada Department of Fisheries and Oceans valid until December 31, 2019. The costs of meeting these requirements are accounted for as water licence costs in the year they are paid.

(b) Financial Information System Lease

The Utility leases a financial information system from the parent. Minimum lease payments for the remaining four years are as follow

	Total	\$	678	
	2009		147	
	2008		177	
	2007		177	
	2006	S	177	
rout yours are as	ionotes.			

(c) Mayo - Dawson Apprenticeship Benefits Agreement

Under this agreement, the Utility is obligated to annual payments of \$15,000, adjusted by the percentage change in the Canadian consumer price index, to both The Tr'ondek Hwech'in and the First Nation of Nacho Nyak Dun. The agreement came into effect July 1, 2004 and expires June 30, 2024. The costs of meeting these requirements are expensed to Administration in the year to which they relate.

NOTES TO FINANCIAL STATEMENTS December 31, 2005

(tabular amounts in thousands of dollars)

(d) Mayo - Dawson Transmission Line Option Agreement

The Utility has provided an option to two Yukon First nations to acquire up to a \$14,470,000 "indirect interest" in the Mayo-Dawson transmission line system project. The option agreement provides for issuance by the Utility of a long-term debt instrument repayable over forty years, bearing interest equal to the Utility's blended cost of capital, including a component limited to the Utility's realized return on equity. The option expires on January 4, 2007. The option has not been exercised to date.

20. ENVIRONMENTAL LIABILITIES

The Utility's activities are subject to various federal and territorial laws and regulations governing the protection of the environment or to minimize any adverse impact thereon. The Utility conducts its operations so as to protect public health and the environment and believes its operations are materially in compliance with all applicable laws and regulations. Liabilities will be recorded when the occurrence of an environmental expenditure, related to present or past activities of the Utility, is considered probable and the costs can be reasonably estimated. To date, no such specific liabilities have been recorded in the Utility's accounts.

21. RISK MANAGEMENT AND FINANCIAL INSTRUMENTS

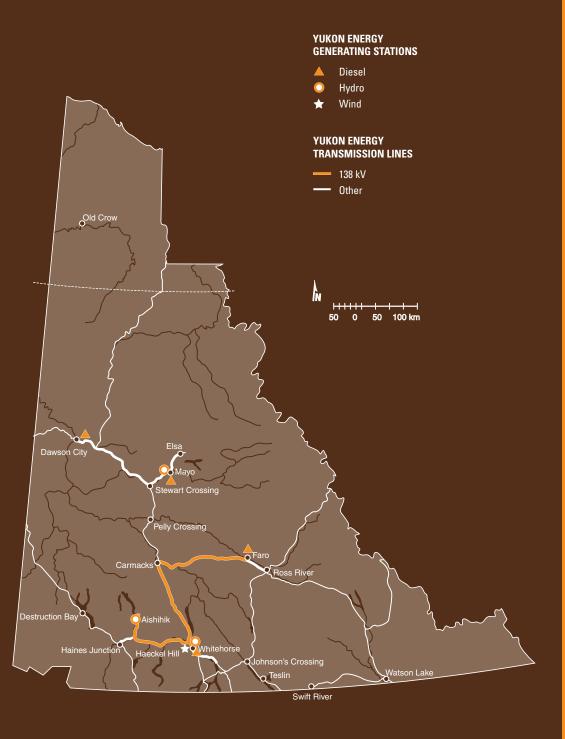

The fair value of cash and cash equivalents, accounts receivable, diesel contingency fund, and accounts payable approximate the carrying amount of these instruments due to the short period to maturity. The fair value of long-term debt is described in Note 13. The Utility also has access to a \$10 million line of credit. The renewal date on the line of credit is October 31, 2009. The account accrues interest on withdrawals at prime rate. The facility was not drawn on at year end.

The Utility is not exposed to significant interest rate risk due to its long-term debt having fixed interest rates. The Utility's credit risk is minimal in that its primary customer is a regulated utility.

22. COMPARATIVE FIGURES

Certain 2004 figures have been reclassified to conform with the current year's presentation.
