Mission Statement

YUKON ENERGY is committed to leading the transition to a more reliable, robust and renewable electricity system that meets the demands of tomorrow while safeguarding the energy needs of today.

1.0 Mandate

Yukon Energy Corporation acknowledges its environmental responsibility and is committed to a high standard of environmental performance through implementation of a comprehensive environmental management system. We will respect and protect the environment through all our activities, processes, and planning. We will work to minimize the environmental impacts of our facilities, operations, and businesses.

The ultimate success of corporate environmental performance is driven by accountability, leadership, and engagement of upper management, and implementation of a management system for continuous improvement while applying the following principles. Accountability and responsibility for these principles extends from Board of Directors to executives, managers, supervisors, workers and contractors.

2.0 Principles

Yukon Energy will:

- Meet environmental requirements defined by legislation and regulation, as well as specific Yukon Energy commitments, and exceed them wherever practical;
- Strive for efficient, sustainable, and responsible use of natural resources;
- Manage and mitigate the effects and risks to the environment associated with our operations with an overall goal of continual improvement;
- Implement and maintain a comprehensive ISO 14001 environmental management system;
- Communicate with and engage our stakeholders openly, honestly and on a regular basis;
- Communicate with and engage Yukon First Nations people in a manner that respects their values, culture and traditions;
- Integrate environmental considerations into decision making and planning;
- Research and understand the effects of climate change on operations and project planning, and develop mitigation and adaptation measures where identified and needed; and,
- Provide employees with appropriate training to ensure their work is conducted in an environmentally responsible way.
